

STORYBOARD FOR LEVEL 3 BUTTON ANIMATIONS

1

2

Clicking on any Level 2 sub-header causes other sub-headers to dim, and a distinct glow remains around the selected sub header.

The main graphic *tweens*, scaling down and blending with the background color, and also moving down and to the left side of the screen below but may overlap subheaders.

3

A white panel slides open on the right side of the screen from left to right.

4

Content will fade in to the white panel. A scroll bar should appear if needed.

For blog links (News & Student blogs), a new window (or tab) will open with the XHTML blog in that window.
